

Forward Calls

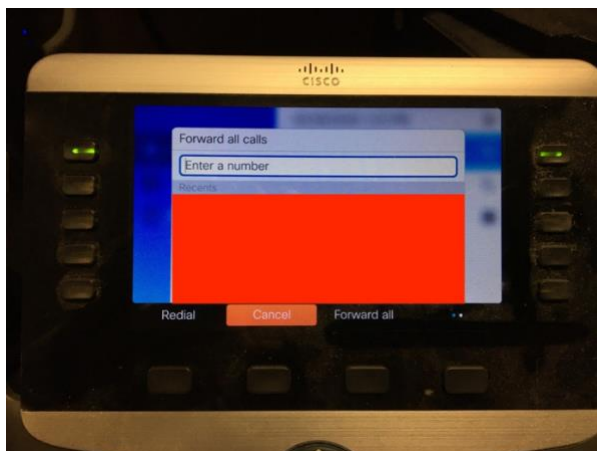

You can forward calls from any line on your phone to another number. Call forward is phone-line specific. If a call reaches you on a line where call forwarding is not enabled, the call rings as usual.

Procedure

1. When the line to be forwarded is inactive, press “Forward All.”

2. Enter the call forward target number exactly as you would dial it from your phone, or select an entry from your list of recent calls.

3. When a line is forwarded, you see the Forward all  icon with the line.
